

CLEAN AWAY COVID
with safer disinfection.

Keep the surface **glistening wet**
to **disinfect** if someone is sick.

Disinfect only when needed.

If someone in your home is sick, it's important to disinfect your surfaces after cleaning them in order to protect other family members. To properly disinfect, spray or apply the disinfectant to the surface and leave the surface glistening wet for the recommended amount of time stated on the disinfectant's label. Be sure the surface remains sparkling wet the entire time. When the time is up, wipe the surface dry with a clean microfiber cloth.

SPREAD THE WORD. NOT THE VIRUS.

Learn more at CleanAwayCOVID.org.

Ensure Proper Ventilation.

Open a window or turn on an exhaust fan to ventilate the room while disinfecting.

Take Precautions If You Are Pregnant.

If possible, have another adult in your home tackle the disinfecting. If not, use a safer disinfectant product that is hydrogen peroxide based.

Disinfect Frequently Touched Surfaces.

These include door knobs and handles, light switches, hand rails, cabinet pulls, sink faucets and toilet handles.
