Chapter 7
Food Package

Table of Contents

The WIC Food Package is a major benefit of the WIC Program. The purpose of this chapter is to provide policy on what the allowable foods are and how to determine the most appropriate food package prescription to meet the participant's needs. The chapter also provides information on infant formulas and other products allowed through WIC medical documentation requirements.

Section 1. Maximum Monthly Allowances of Supplemental Foods ........................................... 1
  ▪ Food Packages I – VII
  ▪ Crossroads Description Of Food Packages
  ▪ Exempt Infant Formulas (EXF) And WIC-eligible Nutritionals (WEMF)
  ▪ Maximum Monthly Quantities Of Supplemental Foods
  ▪ Infants Ages 6 – 11 Months On Food Package III
  ▪ Fully Breastfeeding Woman With Multiples – Food Package VII+
  ▪ Participants Who Need Formula And Other Products In Excess Of Amounts Allowed Through WIC

Section 2. WIC Supplemental Foods .................................................................................. 5

Section 3. WIC Formulas ...................................................................................................... 11
  ▪ Participants Eligible to Receive Formulas
  ▪ Types (Forms) of Formulas
  ▪ Formulas and Other Products
  ▪ Metabolic Formulas
  ▪ Non-Approved WIC Costs

Section 4. Prescribing Food Packages .................................................................................. 15
  ▪ Default Food Package
  ▪ Adjusted Food Package
  ▪ Situations Prompting Food Package Adjustment
  ▪ Breastfeeding Status
  ▪ Infant Food Packages
  ▪ Infants 6-11 Months Of Age On Food Package III
  ▪ Automatic Food Package Change When An Infant Turns One Year of Age

Section 5. Medical Documentation Requirements .................................................................. 21
  ▪ Situations Requiring Medical Documentation (Prescription)
  ▪ Medical Conditions Indicating Need For Prescribed Product
  ▪ Individuals Authorized To Prescribe
  ▪ Required Medical Documentation
  ▪ Types Of Medical Documentation
  ▪ Medical Documentation Changes For Formula And Other Products
Participant Transfers

Section 6. Ordering Formula and Other Products From the Nutrition Services Branch.............25
  • Crossroads Operations
  • Ordering Products
  • Receiving Products
  • Issuing Products

Section 7. Inventory and Issuance of Formula and Other Products ..........................27
  • Receipt Of Formulas And Other Products
  • Storage Of Formulas And Other Products
  • Issuance Of Formula And Other Products from Inventory
  • Documentation Of Receipt And Issuance Of Formulas And Other Products
  • Disposal Of Product That Is Damaged, Tampered With, Or Past Expiration Date

Section 8. Inventory and Issuance of Metabolic Products ..............................29
  • Receipt Of Metabolic Formulas
  • Storage Of Metabolic Formulas
  • Documentation Of Issuance Of Metabolic Formulas
  • Disposal Of Metabolic Product That Is Damaged, Tampered With, Or Past Expiration Date

Attachment 6. Formula Disposal Log
Maximum Monthly Allowances of Supplemental Foods

There are seven federally defined WIC food packages, each with maximum quantities of supplemental foods allowed each month. (7CFR 246.10)

- **Food Packages I - VII**
  - **I**: Available supplemental foods for infants receiving contract infant formula (IF) ages 0 through 5 months. NC contract formulas are Gerber Good Start Gentle, Gerber Good Start Soothe and Gerber Good Start Soy.

  - **II**: Available supplemental foods for infants receiving contract infant formula (IF) ages 6 through 11 months

  - **III**: Available supplemental foods for infants, women or children who have medical documentation (qualifying condition) to receive an infant formula (IF) exempt infant formula (EXF) or WIC-eligible nutritionals (WEN)

  - **IV**: Available supplemental foods for children 1 through 4 years

  - **V**: Available supplemental foods for a pregnant woman, a pregnant woman fully formula feeding, a pregnant (single or multiple fetuses) woman partially breastfeeding > MMA or a partially breastfeeding woman ≤ MMA

  - **VI**: Available supplemental foods for a postpartum non-breastfeeding woman, or a partially breastfeeding woman > MMA (single or multiple infants) up to 6 months postpartum.

  - **VII**: Available supplemental foods for a fully breastfeeding woman, a pregnant woman with two or more fetuses, a pregnant woman partially (mostly) breastfeeding a singleton infant who receives ≤ to MMA, a woman who is partially (≤ MMA) breastfeeding multiple infants from the same pregnancy or a pregnant woman fully breastfeeding a singleton infant. *Note: a woman who is fully breastfeeding multiple infants is eligible for 1.5 times the foods available in Food Package VII.*

For Food Packages I, II and III, only one infant formula, exempt infant formula or WIC-eligible nutritional at a time can be issued.

- **Crossroads Descriptions of Food Packages.** Crossroads describes food packages using WIC category, age category and breastfeeding status. The following terms are used throughout this section:

  - **Monthly Maximum Allowance (MMA)** indicates a specific amount of formula that may be provided to an infant in an age category with a particular breastfeeding status. This is not the same as the Category Max Quantity listed on the Prescribe Food Screen.
• **WIC Category**
  ▪ Pregnant Woman: means a woman reporting at least one fetus.
  ▪ Breastfeeding Woman: means a woman who is breastfeeding one or more infants at least one time per day.
  ▪ Non-Breastfeeding Woman: means a postpartum woman up to six months after termination of pregnancy who is not breastfeeding.
  ▪ Infant: means a person less than one year of age.
  ▪ Child: means a person who has had their first birthday.

• **Age Category:**
  ▪ Infant 0 months
  ▪ Infant 1 to 3 months
  ▪ Infant 4 to 5 months
  ▪ Infant 6 to 11 months
  ▪ Child 12 to 23 months
  ▪ Child 2 yr. to 5 yr.

• **Breastfeeding Status** – applies to both women and infants
  ▪ Fully Breastfeeding – means the dyad is breastfeeding and receiving no formula from WIC
  ▪ Partially Breastfeeding ≤ MMA – means the dyad is breastfeeding and is receiving some formula from WIC up to the maximum amount allowed for the partially breastfed infant in an age range
  ▪ Partially Breastfeeding > MMA – means the dyad is breastfeeding and is receiving formula from WIC in a range above the maximum for partially breastfed infants in an age range
  ▪ Fully Formula Feeding – means the dyad is not breastfeeding and receives the maximum amount of formula allowed for fully formula fed infants in an age range

• **Additional Options** – applies to women only
  ▪ Multiple Fetuses – means a woman reports more than one fetus in a pregnancy
  ▪ Multiple Infants – means a woman is fully breastfeeding more than one infant

• **Reconstituted Fluid Ounces** (RFO) – means the amount of formula that a product will produce at standard dilution.
Full Authorized Nutrition Benefit (FNB): the minimum amount of formula for a fully formula fed infant. The amount is established at the level for reconstituted liquid concentrate. This is the Category Max Quantity listed on the Prescribe Food page. Note that the Category Max Quantity in Crossroads is not always the MMA. Crossroads will allow any form of Infant Formula (IF) to be prescribed on the Prescribe Food screen.

Note: The food package with maximum quantities of supplemental foods allowed each month to WIC participants are described in Attachment 5 based on a participant’s WIC category, age and breastfeeding status.

- Exempt Infant Formulas (EXF) and WIC-eligible nutritionals (WEN) can be prescribed only after appropriate medical documentation is completed in the system.

- The competent professional authority (CPA) can prescribe any amount of formula up to the MMA for that feeding option depending on the form of product (powder, concentrate or ready-to-feed).

  - Example:
    - Category Max Quantity for Gerber Good Start Gentle is listed at 806 oz.
    - CPA prescribes maximum amount of 806 oz. for a fully formula fed 2-month-old infant.
      - 9 total cans of formula will be issued.
      - Each can reconstitutes to 92 ounces.
      - Total RFO = 9 x 92 = 828.
      - Crossroads will issue at least the FNB up to the MMA.

- Ready-to-feed (RTF) formula may only be prescribed under certain circumstances. See Chapter 7, Section 3 for specific information.

- Note: There is no range in the amount of formula available in Food Package III to women and children. There is only one value of 910 RFO; this is the MMA. Issued is the greatest RFO of a product without going over the MMA.

  - Example:
    - A 2-year-old has Medical Documentation of a qualifying condition and is prescribed to have Pediasure 4 cans per day.
      - Each can is 8 oz.
      - 4 cans/day x 8 oz. = 32 oz./day
      - 32 oz./day x 30 days per month = 960 oz.
      - WIC maximum = 910 oz.
      - CPA prescribes 910 oz.
      - 113 cans will be issued.
      - 113 cans x 8 oz. /can = 904 oz.
      - 904 oz. is the maximum that can be provided for that product.
– One more can would put the issuance at 912 oz. which is over the maximum allowed.

- **Maximum Monthly Quantities of Supplemental Foods**
  In most instances the default amounts initially displayed on the Prescribe Food screen is the maximum quantity allowed per food category. The exception is the partially breastfed infant. The quantity of formula must be prescribed with intention.

- **Infants ages 6 – 11 months on Food III**
  Infants ages 6 – 11 months on Food Package III on contract infant formula (IF), exempt infant formula (EXF) or WIC-eligible nutritionals may receive formula at the amounts of an infant age 4 – 5 months if no infant foods (infant cereal and infant fruits and vegetables) are provided.

- **Fully Breastfeeding Woman with Multiples – Food Package VII+**
  The food package for the woman fully breastfeeding multiple infants is equal to 1.5 times the food items in Food Package VII. The provision of some of the foods is not possible on a monthly basis due to approved foods sizes; therefore, food amounts are alternated every other month. For example, only 16-ounce size is approved for cheese, but 24 ounces is allowed monthly in the standard (default) food package. Cheese will be issued as 1 pound one month and 2 pounds the following month. This distribution allows for the maximum provision in purchasable sizes. Food package III for a fully breastfeeding woman of multiple infants includes all the foods listed above plus up to 1365 RFO of a prescribed WIC-eligible nutritional.

- **Participants Who Need Formula And Other Products In Excess Of Amounts Allowed Through WIC**
  The amounts outlined earlier in this section are the maximum amounts available for distribution through the WIC Program. Alternative options may be available for participants on Medicaid requiring excess amounts of formula not provided by WIC. Staff is encouraged to assist participant families in obtaining the approval for additional product through Medicaid. Additional information is available at www.nutritionnc.com under Local Agency Resources.

  Information about assistance provided to the family should be documented in the participant care plan in Crossroads.
WIC Supplemental Foods

Federal regulations define the minimum criteria for determining WIC supplemental foods with each State Agency having the ability to further define the selection criteria. The table below outlines the criteria that North Carolina uses to determine approved foods and not approved foods. Specific food choices in some food categories are outlined at www.nutritionnc.com. Also refer to the most current “NC WIC Program Shopping Guide” used by participants and the “North Carolina WIC Vendor Transaction Guide” used by vendors. These guides may be ordered from the Nutrition Services Branch.

### Table of Contents

- **Milk and Milk Substitutes:** Cow’s Milk, Cheese, Soy-based beverages, Tofu and Yogurt  
  Pages 5 - 6
- **Juice:** Concentrate and Single Strength  
  Page 6
- **Whole Grain Products:** Cereal, Bread, Brown Rice, Tortillas (Soft Corn, Whole Wheat) and Whole Wheat Pasta  
  Page 7
- **Protein Products:** Peanut Butter, Mature Legumes (Beans, Peas, Lentils), Eggs and Canned Fish (Salmon, Tuna)  
  Page 8
- **Formulas or Nutritional Products**  
  Page 9
- **Infant Foods:** Cereal, Meats, Fruits & Vegetables  
  Page 9
- **Cash-Value Benefit:** Fruits and Vegetables  
  Page 10

### Cow’s Milk: Size and type as indicated on shopping list

**Approved**
- 1 gallon, ½ gallon and 1-quart fresh fluid milk
- ½ gallon lactose-reduced or lactose-free milk
- 1 quart Ultra High Temperature (UHT) milk
- 12 oz. canned evaporated milk
- Skim, 1%, 2% and whole pasteurized milk

**Not Approved**
- Buttermilk
- Chocolate or other flavored milk
- Goat’s milk
- Milk drinks
- Organic milk
- Powdered milk

### Cheese: Size and type as indicated on shopping list

**Approved**
- 16 oz. prepackaged block or sliced (wrapped or unwrapped)
- Any of the following types of cheese or blends of any of these cheeses:
  - Brick
  - Cheddar
  - Colby
  - Monterey Jack
  - Mozzarella
  - Muenster
  - Pasteurized processed American
  - Provolone
  - Swiss
  - Lower-sodium varieties
  - Reduced-fat and reduced-cholesterol varieties

**Not Approved**
- Cheese foods
- Cheese products
- Cheese spreads
- Cheese with additions such as wine, nuts, seeds, jalapenos, pimentos, herbs, spices, seasonings or flavorings (wine or smoked)
- Deli or hoop cheese
- Organic cheese
- Snack, cubed, shaped, crumbled, strips, sticks, diced, grated or shredded cheese
- String cheese
### Soy-based Beverage: Must be an approved brand. Refer to [www.nutritionnc.com](http://www.nutritionnc.com) for specific list of foods.

WIC Formulas

The WIC Program promotes breastfeeding as the best way to feed infants. When a mother cannot or chooses not to fully breastfeed her infant, the WIC Program can provide a wide variety of formulas and other products. When medically necessary, formula and other products are also available for women and children. For any participant, only one formula/WIC-eligible nutritional can be issued at a time.

- **Participants Eligible to Receive Formulas**
  The following groups of participants may receive formulas and other products through WIC:

  - Infants (birth to 12 months of age)

  - Children and women when a physician, physician extender (physician assistant or nurse practitioner) or certified nurse midwife determines that the use of formula or other product is medically necessary

  - Participants who are not hospitalized or living in an institution

- **Types (Forms) of Formulas**
  Formulas may come in three types (or forms): powder, concentrate, and ready-to-feed. Often, the same product is available in more than one type/form.

  - **Powder.** These products must be mixed with water or added to another fluid product according to manufacturer’s instructions or to instructions of the prescribing health care provider.

  - **Concentrate.** These products must be mixed with water according to manufacturer’s instructions or to instructions of the prescribing health care provider.

  - **Ready-to-Feed (RTF).** These products do not require mixing with water. They may be used only when the CPA confirms and documents one or more of the following:

    - **Multi-serving containers (e.g., 32 oz.)**
      - The product is available only in ready-to-feed.
      - The participant’s household has an unsanitary or restricted water supply.
      - The caretaker may have difficulty in correctly diluting the concentrate and powder products.

    - **Single-serving containers (e.g., 2 oz., 8 oz.)**
      - The product is available only in single-serving ready-to-feed sizes.
      - No other size may be appropriate (i.e., participant is homeless and without adequate refrigeration and/or a way to prepare product in a sanitary manner).
      - There is an emergency or catastrophic situation such as a hurricane or major flood. In these instances, additional guidance would be distributed by the State
NOTE: Single-serving nursette bottles (i.e., 2 oz.) should not be used simply to provide a higher caloric density formula. If a health care provider provides medical documentation for a higher caloric density formula (i.e., 22 or 24 calories per ounce), the CPA should contact the prescribing individual to discuss if an alternative method of providing additional calories is appropriate.

### Formulas and Other Products

#### Infant Formulas (Contract Standard Milk- and Soy-Based)

Most infants who are not fully breastfed consume standard milk- or soy-based infant formulas for the first year of life. Contract standard milk- or soy-based infant formulas are products for which the North Carolina WIC Program receives a reimbursement per unit of formula transacted (i.e., a rebate). The contract formulas allowed by the North Carolina WIC Program are Gerber Good Start Gentle, Gerber Good Start Soothe and Gerber Good Start Soy.

*NOTE: Standard milk- and soy-based infant formulas which are nutritionally comparable to the contract infant formulas but for which the North Carolina WIC Program does not have under contract are NOT allowed.*

- **Exempt Infant Formulas.** (EXF) WIC allows exempt formula to meet the nutritional needs of infants with a medical condition for which a standard milk-or soy-based infant formula is contraindicated.

- **WIC-Eligible Nutritionals.** (WEN) WIC also allows other formulas and products to meet the nutritional needs of participants with a documented medical condition.

Medical documentation is required for a participant to receive an exempt formula (EXF) or a WIC-eligible nutritional through WIC. Refer to Section 5 for information about medical documentation requirements and to Attachment 1 for a listing of the more frequently used exempt formula (EXF) and WIC-eligible nutritionals.

If medical documentation is received for an exempt infant formula or WIC-eligible nutritionals and it is not listed on Attachment 1, the CPA should contact the Nutrition Services Branch.

#### Metabolic Formulas

Most products used by individuals with a metabolic disorder are ordered by the Nutrition Services Branch (NSB) or AccessCare and shipped to the Local Agency WIC Program (Refer to Section 8 for information on receipt of products from the NSB). Staff should receive a memo from the ordering agency in advance of any shipment of metabolic products. This correspondence includes the contact information for staff at the tertiary medical center that follows the participant. It also includes instructions regarding nutrition care and nutrition education for the participant, and other products and/or WIC-allowable foods which may be provided.
Non-Approved WIC Costs
All apparatus or devices (e.g., enteral feeding tubes, bags and pumps) designed to administer WIC formulas are not allowable WIC costs. Refer to Chapter 12, Section 1 for further information on WIC costs.
Prescribing Food Packages

A CPA must prescribe a specific food package at each certification and when modifications are requested or required. There are several considerations in prescribing an appropriate food package.

- **Default (Standard) Food Package**
  When the CPA navigates to the Prescribe Food screen the default (standard) food package appropriate for the WIC category, age category and breastfeeding status of the participant will display. This package offers the maximum monthly allowances (MMA) of supplemental foods.

- **Adjusted Food Package**
  - The CPA may adjust the food package when presented with medical documentation which indicates one of the following modifications to a default food package:
    - Exempt infant formula for an infant
    - Standard or exempt infant formula (EXF) or WIC-eligible nutritionals for a woman or child
    - Whole milk for a child over 2 years of age or a woman participant
  
  - The CPA may adjust the food package by participant request if:
    - Adjustments that are allowed within the subcategory can be completed on the Prescribe Food screen.
    - Elimination of a specific category can be completed on the Prescribe Food screen.
  
  - Participants may make choices within subcategories or decline one or more specific food categories:
    - Infant formula
    - Infant cereal (no subcategories)
    - Infant meats (no subcategories)
    - Milk
    - Juice (no subcategories)
    - Cereal (no subcategories)
    - Eggs (no subcategories)
    - Legumes (dry beans, canned beans or peanut butter)
    - Breads/Whole Grains
    - Canned fish (tuna or salmon) (no subcategories)
    - Fruits and Vegetables (Cash value benefit) (no subcategories)

  - Low-fat (1%) milk or non-fat (skim) milk is the standard milk for issuance to children 24 months of age and older, and to women.
  - Reduced fat (2%) milk may be issued to children age 24 months of age and older or to women when a CPA determines there is a medical need based on an individual nutrition assessment. 2% milk may not be based on a personal preference.
  - Examples of medical need include underweight, weight loss and weight loss during pregnancy. When 2% milk is provided to children 24 months of age and older, or to
women, the justification of providing it must be clearly documented in the child’s or woman’s care plan.

- Whole milk is the standard milk for issuance to children 12 to 23 months of age.
  - Reduced-fat (2%) milk may be issued to a child 12 – 23 months of age when a CPA determines there is a medical need based on an individual nutrition assessment, not a preference.
  - Examples of medical need include children for whom overweight or obesity is a concern. The CPA should consult with the child’s health care provider, if necessary. Reduced-fat milk may also be issued to children 12 to 23 months of age when the child’s health care provider has instructed that the child have it in place of whole milk. When 2% milk is provided for children 12 to 23 months of age, the justification of providing it must be clearly documented in the child’s care plan.

- Participants may choose one or more milk of the following subcategories (no medical documentation by participant’s health care provider is required):
  - Evaporated milk
  - UHT milk (only if participant has limited refrigeration)
  - Lactose-free or lactose-reduced milk
  - Soy-based beverage

- Participants may choose one or more of the following milk substitutions (no medical documentation by participant’s health care provider is required):
  - Cheese (maximum of one pound above default food package)
  - Tofu
  - Yogurt (maximum of 1 quart of yogurt may be substituted for 1 quart of fluid milk)
    - Note: The same guidance in the preceding section on whole milk and reduced fat milk options to children (12-23 months of age) apply to yogurt issuance. Low fat or nonfat yogurts are the only types of yogurt authorized for children age 24 months of age and older and women.

### Situations Prompting Food Package Adjustment

- **Participants with Specific Food Intolerances/Vegan Diet.**
  - **Lactose Intolerance.** When the condition is reported by the participant, parent/guardian/caretaker of an infant or child, or by the health care provider, it must be documented in the participant's health record.
    - Adaptation may include:
      - Lactose-reduced milk as a substitute for fresh fluid milk.
      - Soy-based beverage as a substitute for fresh fluid milk (Refer to the additional information below for restrictions).
      - Tofu as a substitute for fresh fluid milk (Refer to the additional information below for restrictions).
      - Yogurt as a substitute for fresh fluid milk (Refer to the additional information below for restrictions).
  - **Food Allergies.** When a food allergy is reported by the participant/caretaker or by the health care provider, it must be documented. Participants who have
a food allergy should receive a food package adapted to their needs. The CPA must remove one or more categories of foods when requested by the participant/caretaker or indicated on the medical documentation.

- **Vegan Diet.** When adherence to a vegan diet is reported by the participant or parent/guardian/caretaker of an infant or child, it must be documented and the food package adapted to their needs.

### Issuance of Soy-Based Beverage and Tofu

**Children:**

Issuance of tofu and soy-based beverage as substitutes for milk must be based on an individual assessment and consultation with the child’s health care provider if necessary.

- Soy-based beverage may be substituted for milk on a quart-for-quart basis up to the total maximum allowance of milk.
- Tofu may be substituted for milk at the rate of 1 pound per quart of milk up to the 4-quart substitution of cheese, tofu, or yogurt threshold for children (Food Package IV). *Additional amounts may be substituted up to the maximum allowance for fluid milk for lactose intolerance or other reasons assessed and documented by the CPA.*

**Women:**

- Soy-based beverage may be substituted for milk on a quart-for-quart basis up to the total maximum allowance of milk.
- Tofu may be substituted for milk at the rate of 1 pound per quart of milk up to the 4-quart substitution of cheese, tofu, or yogurt for pregnant, postpartum and partially breastfeeding women (Food Packages V and VI). No more than a total of 6 quarts of milk may be substituted for a combination of cheese, tofu or yogurt for fully breastfeeding women (Food Package VII). *Additional amounts may be substituted up to the maximum allowances for fluid milk for lactose intolerance or other reasons assessed and documented by the CPA.*

- **Participant Who Are Homeless.** If an individual is homeless, it should be indicated in the Participant Demographics in Crossroads. Depending on her living situation, a homeless participant may need certain foods and/or alternative packaging to accommodate her available food storage and preparation facilities.

- **Participants Who Have Limited or No Refrigeration.** Changes that can be made in the food package to adapt for any participant with limited or no refrigeration include:
  - Ordering single-serving ready-to-feed infant formula from the state office
  - Substituting UHT milk or evaporated milk for fresh fluid milk
  - Not issuing cheese or eggs

**Breastfeeding Status**

- The food package for an infant is determined by the breastfeeding status. The breastfeeding status is initially driven by the selections made on the Health Information screen. After a food prescription has been saved, adjustments may be initiated on the Prescribe Foods screen or the Health Information Screen.
There are four breastfeeding status classifications in Crossroads: fully breastfed, partially breastfed ≤ Maximum Monthly Allowance (MMA), partially breastfed > MMA and fully formula fed. See Section 1 of this chapter for more information on MMA.

There are four corresponding food packages/feeding options for postpartum women: fully breastfeeding, partially breastfeeding ≤ MMA, partially breastfeeding > MMA, and non-breastfeeding.

<table>
<thead>
<tr>
<th>Infant Breastfeeding Status</th>
<th>Woman Category and Breastfeeding Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fully breastfed (receives no formula from WIC)</td>
<td>Breastfeeding Woman</td>
</tr>
<tr>
<td>Partially breastfed ≤ MMA</td>
<td>Breastfeeding Woman</td>
</tr>
<tr>
<td>Partially breastfed &gt; MMA</td>
<td>Breastfeeding Woman</td>
</tr>
<tr>
<td>Fully formula fed</td>
<td>Non-Breastfeeding Woman</td>
</tr>
</tbody>
</table>

*Note: After six months of age this woman is not eligible for food benefits.

The certified postpartum woman (breastfeeding or non-breastfeeding) and her infant(s) is/are considered a dyad. The amount of formula the infant receives will drive the mother’s food package prescription.

If the food packages within the dyad contradict Crossroads will provide an error message alerting the user that corrections must be made (to prevent over issuance) or must be made (to provide both dyad members the maximum allowable supplemental foods).

Women who are partially breastfeeding an infant six months of age or older receiving the > MMA or the full formula package are not eligible for food benefits. This woman continues to be certified as a breastfeeding woman and is eligible for breastfeeding education, support and supply issuance.

*Note: The breastfeeding status on the Prescribe Food page may not correspond with the dyad’s actual feeding practice.*

**Infant Food Packages**

- Automatic changes occur in formula amount for fully formula fed (standard or exempt infant formula).
- Partially breastfed infants must have the formula amount prescribed with intention and confirmed with each age category and issuance. Otherwise, the initial amount prescribed will carry forward, even though the MMA changes.

**Complementary Foods.** When infant turns six months of age, s/he may begin to receive complementary foods. The Crossroads system automatically notes this date in the carousel to take effect the first issue date after reaching six months of age.

- Fully breastfed infants receive:
  - Infant fruits and vegetables
  - Infant meats
– Infant cereal
  ▪ Partially breastfed \( \leq \) MMA; partially breastfed \( > \) MMA and fully formula fed infants receive:
    – Infant fruits and vegetables
    – Infant cereal
  ▪ If this change is not appropriate for the participant, staff must delete the inappropriate food categories.

- Infants 6 – 11 Months of Age On Food Package III

Federal regulations allow the issuance of exempt infant formula (EXF) at the same maximum monthly allowance as an infant 4 - 5 months of age of the same feeding option receives if no infant foods (infant cereal and infant fruits and vegetables) are provided. Medical documentation is required for the issuance of any exempt infant formula.

Federal regulations also allow the issuance of contract infant formula (IF) at the same maximum monthly allowance as an infant 4 – 5 months of age of the same feeding option receives if no infant foods (infant cereal and infant fruits and vegetables) are provided. Medical documentation is required for this level of issuance for the contract infant formulas.

*Note: Every infant must have the food package prescription verified. Failure to do so will result in an error message.*
  
  - If the increased amount of formula is prescribed the CPA must delete the infant foods before saving the prescription.
  - If the standard amount of formula is prescribed the CPA must change the amount of formula from the maximum displayed (884 RFO to 624 RFO).

- Automatic Food Package Change When an Infant Turns One Year of Age
  
  - The infant food package is provided throughout the first year
  - A default food package for a 12 - 23-month-old child will be in the carousel when the infant is added to the Program.
  - A child’s food package will automatically be issued when the first date to spend is on or after the first birthday.
Medical Documentation Requirements

Medical documentation is required for the prescription and issuance of many products allowed through the WIC Program. All medical documentation is subject to WIC approval and provision based on program policy and procedures.

- **Situations Requiring Medical Documentation**

  - An infant requires a formula other than the contract milk-or soy-based infant formulas
  - A child or woman requires an exempt formula or WIC eligible nutritionals
  - A child 24 months of age and older or a woman requires whole milk

- **Medical Conditions Indicating Need for Prescribed Product**

  - **Formulas and other products.** The prescribing individual must document a medical condition that indicates a need for the prescribed formula or WIC-eligible nutritionals in the treatment or management of the condition. The responsibility for this treatment or management of the condition remains with the prescribing individual. The qualifying conditions include but are not limited to those listed on the table below as well as other medical conditions that impair ingestion, digestion, absorption or utilization of nutrients that could adversely affect a participant’s nutrition status. The table below lists examples of medical conditions that may indicate a need for the use of some formulas or products.

</tr>
</tbody>
</table>

* Preterm: Delivery of an infant born less than or equal to 36 6/7 weeks gestation. Early Term: Delivery of an infant born greater than or equal to 37 0/7 and less than or equal to 38 6/7 weeks gestation.
** Preterm discharge infant formulas provide a nutrient intake that is between a preterm and term infant formula.

<p>| Other exempt formulas or products       |                                                                        |
|----------------------------------------|                                                                        |

</tbody>
</table>

**NOTE:** These products are not allowed for the following:

- Infants with a diagnosed formula intolerance or food allergy to lactose, sucrose, milk protein or soy protein that does not require the use of an exempt infant formula.
- Infants with a non-specific formula or food intolerance.
- Women and children who have food intolerance to lactose or milk protein that can be successfully managed with the use of one of the other WIC food packages.
- Solely for the purpose of enhancing nutrient intake or managing body weight.

- **Whole milk for children 24 months of age and older and for women.** The prescribing individual must document a medical condition that indicates a need for whole milk in the treatment or management of the condition.

- **Individuals Authorized to Prescribe**
  Formula/products or foods requiring medical documentation may be authorized only when prescribed by a physician, a physician extender (physician assistant or nurse practitioner) or a certified nurse midwife.

- **Required Medical Documentation**
  The medical documentation must include the following information as applicable:
  - Participant's name and date of birth
  - Specific name of the formula, product or whole milk prescribed, including amount of formula/product needed per day
  - Specific medical condition(s) requiring use of the prescribed formula/product or whole milk
  - Duration of medical documentation (not to exceed 12 months of age for infants; not to exceed 12 months in duration for children and women)
  - Specific WIC foods not allowed due to the qualifying condition
  - Signature of the prescribing individual
  - Prescribing individual’s printed name
  - Contact information (address, phone, fax) for the healthcare provider
  - Date of signature (This will be considered the date of medical determination.)

If a CPA has questions about the medical documentation, including the appropriateness of the product prescribed, the CPA should contact the prescribing individual. Staff unfamiliar with the product prescribed should refer to the manufacturer’s website for up-to-date information.
# Types of Medical Documentations

- **Written Medical Documentations.** The medical documentation must be on the WIC Program Medical Documentation Form (Attachment 2), a physician’s prescription pad, or documented in the health record if the participant receives health care within the local agency. All required information must be included. Prescription forms developed by product manufacturers are not acceptable. Staff may accept written medical documentation that is faxed, emailed, or mailed by the prescribing individual, or is brought to the agency by the participant. Medical documentation must be scanned into the participant record in Crossroads.

- **Verbal Medical documentations.** One month’s issuance may be provided with Verbal Medical Documentation. A CPA may accept medical documentation information verbally from the prescribing individual. Documentation of verbal medical documentation must be made in the participant record in Crossroads and include the date, name and contact information of prescribing individual and required data elements. Staff must obtain written confirmation of the medical documentation within 2 weeks after accepting the medical documentation verbally. Upon receipt of the medical documentation, the timeframe for the approval should be adjusted by re-entering the medical documentation in Crossroads.

# Medical Documentation Changes for Formulas and Other Products
Refer to Chapter 8 for information about procedures when medical documentation changes after issuance has occurred.

# Participant Transfers
Transferring participants who are eligible to receive WIC formula (infant formula, exempt infant formula, or WIC-eligible nutritionals) in Food Package III must have one or more qualifying conditions, and who can be verified as having received the product via verification of certification (VOC), can be issued the product for the duration of the certification period with no further documentation. However, the transferring participant should be encouraged to establish a medical home in the new area as soon as possible for continuity of care.

<table>

</tbody>
</table>
### Exempt formula/product or WIC-eligible nutritionals offered by NC WIC

- Verify VOC documentation of issuance of the exempt formula or WIC-eligible nutritional
- Complete Medical Documentation in Crossroads prior to issuing the product:
  - Prescription Date:
    - Effective Date = Date VOC was prepared
    - Expiration Date = End of Certification Period per VOC
    - Prescription Date = Transfer Date
  - Diagnosis Information:
    - Medical Reason = Diagnosed Condition
  - Physician Information:
    - Physician’s Name = VOC
    - Physician’s Phone = Phone number listed on VOC
- Document circumstances and issuance of the transferring participant in the Nutrition Assessment section of the Care Plan Summary screen.

### Whole milk

- Children who are 24 months of age or older and women may only be issued whole milk if they have medical documentation for its use.
Ordering Formula and Other Products
From the Nutrition Services Branch

Certain formula and other products must be ordered from the Nutrition Services Branch (NSB) because they are not available in the retail system. Attachment 1 indicates which products must be ordered from NSB.

Generally, only human milk fortifier and nursettes are ordered through NSB. Retail availability in certain geographic areas may necessitate the ordering of some products not designated on Attachment 1 and should be addressed on a case by case basis.

- **Crossroads Operations**
  - Participant must be deaggregated from family issuance
  - Place family on a monthly issuance frequency
  - Prescribe food package and save
  - **DO NOT ISSUE**
  - Place order with NSB as per guidelines below
  - Upon receipt of requested product follow guidelines below to add to local agency inventory
  - Contact family to alert them to product availability
  - When family presents for issuance navigate to the Issue Benefits page, verify the current month’s issuance dot is green and select **Issue**
  - The Formula Wizard will appear
  - Select the full amount of current months issuance from inventory displayed
  - If foods are also being issued to the participant proceed with issuance

- **Ordering Products**
  To order products from the NSB, Local Agency staff must complete a Formula and WIC-Eligible Nutritionals Order Form and submit it to the NSB. Refer to Attachment 3 for the Formula and WIC-Eligible Nutritionals Order Form and instructions for completing and submitting it. (A cover sheet is not necessary when faxing orders nor is it necessary to provide the actual prescription.) The original order form must be maintained on file in the Local Agency.

  Unless otherwise notified, orders will be processed by the NSB within two (2) working days of receipt. Products should arrive at the local agency within five (5) working days from the date the NSB processes the order. Local Agency staff should inform the WIC participant/parent/guardian/caretaker of the anticipated delivery date (e.g. up to 7 working days from the time the order is submitted by the Local Agency).

  - **Initial Orders.** Order no more than a one (1) month supply of formula or other product.
  - **Subsequent Orders.** Local Agency staff is responsible for reordering products when needed.
Order no more than a one (1) month supply of formula when the formula is packaged in 2, 3, or 4 oz. bottles (nursettes), packaged in packets (i.e. human milk fortifier) or is for a participant who anticipates needing the product only for a short time.

Up to a two (2) months’ supply of formula may be ordered when the medical condition is chronic, and/or the participant will need the product for an extended period of time. However, only the current month’s issuance may be provided through the Formula Wizard.

**Confirmation of Orders by the NSB.** Once an order has been processed, the NSB will fax the original order form to the originating Local Agency with information noted at the bottom related to the order, including the expected delivery date of the product.

**Receiving Products**
When product is received, staff should verify that it is the product and the amount they ordered and that the shipment is not damaged.

**Correct Shipment.** If the shipment is correct and undamaged, staff should:

- Document receipt of the shipment. Refer to Section 7 for guidance on inventory of formula and other products.
- Contact the participant/parent/guardian/caretaker and arrange for them to pick-up the product from the agency.
- Within 24 hours of product receipt, fax the packing slip (which shows the number of containers received) to the NSB at 919-870-4898. *(The NSB must have a packing slip to pay the invoice.)* Some address labels serve as packing slips. Do not fax freight/trucking slips as these do not contain complete information. If the packing slip is lost, misplaced, or was never received fax a short memo to the NSB which includes your agency name, the name of the formula(s) or product(s), quantity, date product(s) was received and an explanation of why there is no packing slip for the product(s) received.

**Problem Shipment.** If the shipment is damaged, is more or less than the amount ordered, or is the wrong product, staff should call the NSB immediately and speak with the NSB staff responsible for ordering formula and other products.

**Issuing Products**
Refer to Section 7 for guidance on documentation of issuance of formula and other products received from the NSB.
Inventory and Issuance of Formula and Other Products

Local Agencies will frequently have a supply of formula and other products on hand that was ordered by the Local Agency from the Nutrition Services Branch (NSB) for a program participant, returned to the Local Agency by a program participant, and/or received from another Local Agency. In each of these situations, staff is accountable for the management of the products including receipt, storage, inventory, issuance, and disposal.

■ Receipt of Formulas and Other Products

- Received from the Nutrition Services Branch. Products received from the NSB are intended for issuance to a specific individual. Upon receipt, these products must be immediately checked for damage of any kind.
  - Local agency staff will add the complete shipment into the local agency formula inventory in Crossroads

Received from a Participant/Parent/Guardian/Caretaker. Any formula returned by a participant or not received directly from the state office (NSB), another local agency, authorized vendor or wholesaler, must be properly disposed of in a safe manner. It may not be donated to food banks, shelters, or animal shelters.

  - Products containing formula must be opened and emptied. Liquid formula must be opened and poured down the drain; powder formula must be opened and emptied into the trash or reconstituted and poured down the drain.

  - Two staff positions must be present for disposing formula and documenting it on the NC Formula Disposal Log. (WPM Chapter 7, Attachment 6)

  - Staff must document the disposal of products in the Crossroads inventory system.

- Received from Another Local WIC Program. Sometimes, a Local Agency may have a supply in inventory of a specialized formula or other product that could be used by a participant in another Local Agency. The transfer of product from one agency to another must be documented by both agencies (issuance from one agency and receipt by the other). Product received should be checked immediately for signs of tampering, damage (e.g., bulging can), or being out-of-date and should not be used if problems are identified. Refer to the discussion later in this section about disposing of products.

■ Storage of Formulas and Other Products

  - Staff must store all formula and other products in a secure area which is not visible to Program participants.

  - Store formula received from state office, another local agency, authorized vendor or wholesaler separate from formula received from a Participant/Parent/Guardian/Caretaker until disposed in safe manner.

■ Quarterly Reconciliation of Physical Inventory

  - Best practice is to complete inventory quarterly by reconciling issuance/inventory log
with the physical inventory of containers on hand.

- **Issuance of Formulas and Other Products from Inventory**
  - Documentation of issuance of infant formula (IF), exempt infant formula (EXF) or WIC-eligible nutritionals (WEN) will be done in the Crossroads system and can be found in the Journal of Transactions.
  
  - Inventory should be deducted when product is sent to another Local Agency for use by one of their program participants.

- **Disposal of Product That Is Damaged, Tampered With, Or Past Expiration Date**
  Whenever a product in inventory is damaged, found to be tampered with, or is past its expiration date, the product must be opened, disposed of in a safe manner and removed from the clinic inventory.

  - **Product Received from the NSB.** Prior to disposing of product received from the NSB, (i.e., a product ordered by the local agency), call the NSB for instructions.

  - **Documentation of Disposal.** Staff must document the disposal of products in the Crossroads inventory system.
Inventory and Issuance of Metabolic Formula

While Local Agencies do not order metabolic formulas, their offices serve as pick-up locations for metabolic formula for individuals receiving care in NC metabolic clinics. Orders for metabolic formulas are placed by the NSB and AccessCare regardless of WIC status (e.g., many individuals receiving metabolic products are not categorically or income eligible for WIC). Local Agency staff is responsible for the accountability of metabolic products including receipt, storage, inventory, issuance, and documentation of issuance regardless of the recipient’s WIC participation status. Issuance is a paper system separate from Crossroads.

● Receipt Of Metabolic Formulas

  ▷ Received From Metabolic Formula Manufacturer. Metabolic formulas ordered by the NSB or AccessCare are intended for issuance to a specific individual. Upon receipt of a shipment, products must be immediately checked for damage of any kind.

  Note: Metabolic products must not be accepted for return at the local WIC agency. Metabolic clients should be advised to contact the metabolic clinic that manages their prescription. If the product is damaged, tampered with, or past its expiration date, it must be disposed of immediately. Refer to the discussion later in this section about disposing of nutritional products.

  ▷ Received From Another Local WIC Program. Sometimes, a Local Agency has metabolic formula that is not picked up by the client for whom the product was ordered and which could be used by a metabolic client in another county. In such cases, the NSB will coordinate the transfer of the product from the agency to the other. This transfer from one agency to another must be documented by both agencies (issuance from one agency and receipt by the other). Product received should be checked immediately for signs of tampering, damage (e.g., bulging can), or being out-of-date and should not be used if problems are identified. Refer to the discussion later in this section about disposing of products.

● Storage Of Metabolic Formulas

Staff must store all metabolic formula in a secured area which is not visible to program participants.

● Documentation Of Issuance Of Metabolic Formulas

Documentation of receipt and issuance of metabolic products, whether for a WIC participant or not is kept on a paper log. Refer to Attachment 4 which offers a description and examples of two types of inventory/issuance logs that can be used to document receipt and issuance of metabolic formula.

  ▷ Receipt must be documented using the paper system outlined above for all metabolic formulas received regardless of a client’s WIC participation, or received from another local WIC Program.
• Issuance must be documented using the paper system outlined above for a product issued to a WIC participant, to an individual not on WIC but receiving a metabolic formula, or to another local WIC Program for use by one of their program participants.

Confidentiality Of Information on Inventory/Issuance Logs

Inventory/issuance logs, while not directly disclosing medical information, disclose the names of specialized nutritional products along with participant names. Staff should not document medical information on these logs. Staff is also encouraged to implement safeguards that protect the privacy of the participants receiving formula or other products. Examples of such safeguards are covering up the previous entries with a piece of paper while the participant/parent/caretaker is signing for receipt of product or using a separate page for each issuance.

■ Disposal Of Product That Is Damaged, Tampered With, Or Past Expiration Date

Whenever a product is damaged, found to be tampered with, or is past its expiration date; the product must be opened and disposed of in a safe manner.

• Product Received from Orders Placed by the NSB or AccessCare. Prior to disposing of product received from orders placed by the NSB, (i.e., a metabolic product sent to the agency), call the NSB for instructions.

• Documentation of Disposal. Staff must document the disposal of products on the paper log.

Infant Formula = IF  Exempt Infant Formula = EXF  WIC-eligible Nutritionals = WEN
WIC Program Medical Documentation

PURPOSE: To facilitate the collection of required medical documentation necessary for the issuance of specific products through the WIC Program.

GENERAL INSTRUCTIONS: WIC Program staff should provide the WIC Program Medical Documentation form to any participant needing the issuance of a specific exempt infant formula (EXF) or WIC-eligible nutritional (WEN), or whole milk for children 24 months of age or older and women. The WIC Program Medical Documentation form may be faxed, mailed, or given to the individual to take to the health care provider.

The health care provider should complete the relevant sections of the form, including the qualifying condition, the name of the authorized WIC formula (infant formula, exempt infant formula, WIC-eligible nutritional prescribed, including the amount needed per day); or whole milk, any WIC supplemental food(s) not allowed, the duration of the prescription for the participant, sign and date the form, and return it to the Local WIC Program.

DISTRIBUTION: Maintain a scanned copy of the WIC Program Medical Documentation form in Crossroads.

DISPOSITION: The WIC Program Medical Documentation form should be scanned into Crossroads and saved. The physical form should be destroyed upon confirmation that the scan is legible and retrievable from Crossroads.

REORDER INFORMATION: Additional copies of this form may be ordered on the Nutrition Services Branch Requisition Form, DHHS 2507, from:

Nutrition Services Branch
5601 Six Forks Road
1914 Mail Services Section
Raleigh, NC 27699-1914
Chapter 7: Food Package

WIC Program Medical Documentation
Infant (Birth to 12 Months of Age)

The WIC Program promotes breastfeeding for infants the first year of life and beyond and actively supports the American Academy of Pediatrics’ Statement on Breastfeeding and the Use of Human Milk.

A written prescription is required for an infant who uses a formula/product other than a North Carolina WIC contract milk- or soy-based infant formula. Prescription is subject to WIC approval and provision based on program policy and procedures.

Please complete all sections (A-D) for all prescriptions.

DHHS 3835 (Revised 06/2014)
WIC (Review 06/2017)
Ordering WIC Infant Formulas and WIC-Eligible Nutritionals

Purpose: To order formulas or WIC-eligible nutritionals through the Nutrition Services Branch (NSB).

Preparation: The Local Agency Staff will:
1. Complete Sections I-IV -- PRINT LEGIBLY
2. Fax the completed order form to the Nutrition Services Branch (No cover sheet is required.)

The State Agency Staff will:
1. Order the formula or WIC-eligible nutritionals.
2. Complete the bottom part of the form.
3. Send confirmation of the order to the local agency once the order is processed

Distribution: Retain copy on file in both Local and State WIC agency.

Disposition: This form may be destroyed in accordance with the Records Retention and Disposition Schedule for Grants, North Carolina Department of Health and Human Services.

State Office Use Only

Product Number __________________________ # Cases ______ Order Approved By/Date __________________________
Account # __________________________ PO # __________________________ Ref # __________________________

Ordered By/Date __________________________
Estimated Delivery Date __________________________ Date Order Confirmation Faxed to LA __________________________

Order is for ____ containers. Issue ____ containers. Place remaining ___ containers in Local Agency Inventory.

NSB #7827 (10-2014)
Examples of Metabolic Product Inventory and Issuance Logs

The purpose of a metabolic products inventory log is to track receipt and issuance of metabolic products received by the Local Agency from the Nutrition Services Branch, from AccessCare, or from another local WIC Program. The minimum requirements for these logs are outlined in Chapter 7 Section 7.

There are a variety of ways to maintain inventory logs. This attachment includes two examples of logs that Local Agency staff may use or modify as needed for metabolic products.

Example #1 documents receipt and issuance specific to a product type and size such as RTF, concentrate, powder. That is, each product/product type would have its own inventory log.

Example #2 documents receipt and issuance that is not specific to a product type and size. Every product/product type would be on one inventory log.

Instructions for Formula Disposal & Completing Log

Staff 1 & 2:

1. Disposal of formula requires two staff members to be present.
2. Formula must be disposed of in a safe manner. Containers must be opened, and contents disposed of in a safe manner.
3. Enter the date formula was received, date of disposal, formula name, type (powder, concentrate, RTF) and container size.
4. Staff 1 & 2 print name and sign in designated columns.
5. Document in Crossroads and remove product from Inventory.
6. WIC Director or designee must, print name, sign and date within 24 hours.

WIC Director:

1. Create a regular schedule for formula disposal (at least weekly).
2. Designate two (2) staff positions responsible for disposal process.
